Portfolio: huzaifaathar.com

Summary

AI/ML Engineer with 5+ years of software engineering experience, including hands-on work designing, building and deploying production AI systems. Specialised in LLM applications, multi-agent architectures, RAG, and document intelligence. Builds the full pipeline from data preparation and evaluation through containerised cloud deployment and monitoring. Has worked directly with enterprise clients in regulated industries and can explain model behaviour and project progress to non-technical stakeholders.

Experience

Salestech Data & AI – Dec 2025 – Present

Senior Software Engineer (AI)

- Forward-deployed AI engineer embedded with enterprise clients. Gathered requirements directly from stakeholders and delivered AI systems from design through production.
- Designed and built an agentic compliance pipeline for a German manufacturer of safety-critical rail systems. The pipeline reads product specifications, applicable regulation, and certification history together, cutting cross-referencing work that took weeks or months down to minutes.
- Architected a supervisor–worker multi-agent system using GPT-4o and Claude, with each agent scoped to a single task. This improved reliability and made failures easy to isolate.
- Built evidence traceability, so every model conclusion links back to its source documents. Added an engineer review-and-approval step to produce audit-ready outputs for regulators.
- Built a Data Quality Platform for a pharmaceutical client that acts as the gateway between external data sources and the internal warehouse. It monitors completeness, freshness, accuracy, and integrity across 15 European markets.
- Implemented automated alerting, monitoring, and analytics dashboards. Presented results and progress to client stakeholders throughout delivery.

DigitLabs – Sep 2024 – Dec 2025

Full Stack Engineer (AI Products)

- Built backend systems for an LLM-powered chatbot platform in Django, including the API layer that handled prompts, context, and responses between the frontend and language-model services.
- Worked with data scientists to integrate ML-driven insights into reporting and analytics services.
- Built analytics dashboards for usage metrics, query trends, and session behaviour to inform improvements to the model and the product.
- Built a battery-testing management platform (Django/PostgreSQL) connecting OEMs and testing facilities. Integrated multiple external APIs for scheduling and workflows between the two groups.

MTP – Feb 2022 – Aug 2024

Software Engineer

- Managed technical documentation, ensuring all resources were documented in a clear, concise, and organized manner.
- Handled deployment tasks on AWS (EC2, S3, CloudWatch), promptly resolving issues to maintain optimal performance and scalability.
- Built and maintained RESTful APIs in Django and FastAPI for seamless frontend-backend data exchange across multiple products.

Codegic – Aug 2020 – Feb 2022

Associate Software Engineer

- Performed debugging and optimization across frontend and backend to improve product stability and performance.
- Collaborated closely with cross-functional teams to gather requirements and translate them into responsive, intuitive user interfaces.
- Participated in code reviews to ensure code quality, consistency, and compliance with team standards.

Education

Bachelor's Degree in Computer Science

University of Central Punjab, Lahore, Pakistan

Final Year Project: Machine Learning & Image Processing.

F.Sc Pre-Engineering

Punjab Group of Colleges, Lahore, Pakistan

Skills & Expertise

ML & AI:

LLMs (GPT-4o, Anthropic Claude), NLP, agentic and multi-agent systems, RAG, prompt engineering, feature engineering, model evaluation

Frameworks & Libraries:

LangChain, LangGraph, CrewAI, Pandas, NumPy, Django, FastAPI, React.js, Next.js, WebSockets

Languages:

Python, JavaScript, TypeScript, SQL

Databases:

PostgreSQL, MySQL, FAISS, pgvector

MLOps & Cloud:

Docker, Git, CI/CD, evaluation harnesses, model monitoring, AWS (EC2, S3, CloudWatch), Azure, GCP, OCI

Ticketing & Collaboration:

Jira, Linear, GitHub Issues, Slack, Microsoft Teams, Azure DevOps

Documentation:

Technical documentation, knowledge base articles, observability and monitoring, issue troubleshooting and escalation

Communication & Interpersonal

Effective communication, Collaboration, Technical articulation, Problem-solving, Adaptability, and Team-oriented mindset.
